DATA SHEET

T 2547 EN

Type 2422/2424 Pressure Reducing Valve

Self-operated Pressure Regulators

Application

Pressure regulators for set points from 0.05 to 2.5 bar · Valve sizes DN 125 to 250 1) · Pressure rating PN 16 to 40 Suitable for liquids, gases and vapors up to 350 °C

The valve closes when the downstream pressure rises.

The pressure reducing valves, consisting of a valve and an actuator, control the downstream pressure to an adjustable set point. The medium pressure to be kept constant is transmitted through a control line to the diaphragm of the actuator and consequently the valve plug.

Special features

- Low-maintenance, medium-controlled proportional regulators requiring no auxiliary energy
- Wide set point range and convenient set point adjustment using a nut
- Exchangeable set point springs and actuator
- Spring-loaded, single-seated valve with upstream and downstream pressures balanced by a stainless steel bellows or by a balancing diaphragm
- Reduced K_{VS} coefficients to adapt the regulator to the operating conditions
- Standard low-noise plug · Special version with flow divider ST 1 or ST 3 for further noise level reduction. See Data Sheet ► T 8081.

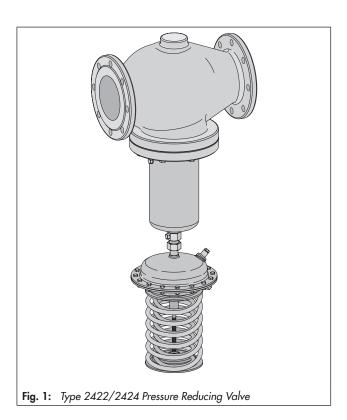

Versions

Type 2422/2424 Pressure Reducing Valve for DN 125 to 250

Consisting of:

Type 2422 Valve balanced by a bellows or a diaphragm with soft-seated plug · Body of cast iron, spheroidal graphite iron, cast steel or cast stainless steel . Type 2424 Actuator with EPDM rolling diaphragm

Special versions

- With flow divider ST 1 or ST 3 for particularly low-noise operation
- With metal-seated plug
- With FPM (FKM) rolling diaphragm, e.g. for mineral oils or flammable gases
- With NBR rolling diaphragm for flammable gases
- Version completely in stainless steel for pressure rating PN 16 to 40 · Details on request
- Actuator with two diaphragms
- With metal cover to protect the set point springs

SAMSO

Principle of operation (see Fig. 2)

The medium flows through the valve in the direction indicated by the arrow. The position of the plug (3) determines the flow rate across the area released between plug (3) and valve seat (2). The plug stem (5) with the plug is connected to the actuator stem (11) of the actuator (10).

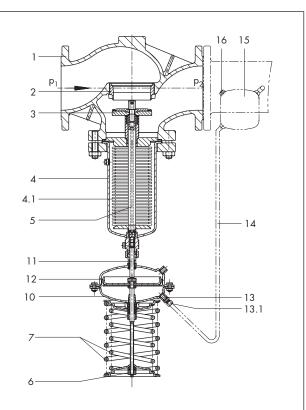

The downstream pressure p_2 is regulated by the set point springs (7) and the set point adjuster (6). When relieved of pressure, the valve is opened by the force of the set point springs.

The downstream pressure p_2 to be controlled is tapped downstream of the valve and transmitted over the control line to the operating diaphragm (12) where it is converted into a positioning force. This force is used to move the valve plug (3) according to the force of the set point springs. The spring force is adjustable at the set point adjuster (6). When the force resulting from the downstream pressure p_2 rises above the adjusted pressure set point, the valve closes proportionally to the change in pressure.

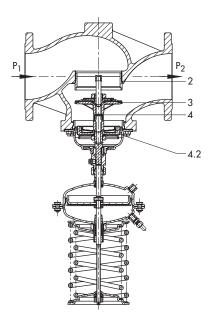

The principle of operation of the regulator balanced by a bellows or diaphragm only differs concerning the pressure balancing. The valves balanced by a diaphragm have a balancing diaphragm (4.2) instead of a bellows (4.1). In both cases, the forces created by the upstream and downstream pressures that act on the valve plug are balanced out.

The valves can be supplied with flow divider ST 1 or ST 3. The valve seat must be replaced on retrofitting the flow divider.

- 1 Valve body
- 2 Seat (exchangeable)
- 3 Plug
- 4 Bellows housing
- 4.1 Balancing bellows
- 4.2 Balancing diaphragm
- 5 Plug stem
- 6 Set point adjuster
- 7 Set point springs
- 10 Actuator
- 11 Actuator stem
- 12 Operating diaphragm
- 13 Control line connection G 1/4
- 13.1 Screw joint with restriction
- 14 Control line (to be mounted on site)
- 15 Compensation chamber
- 16 Filler plug
- p₁ Upstream pressure
- p₂ Downstream pressure

0.1 to	Height H	815	840	9	10	
0.6 bar	Actuator	$\varnothing D = 390 \text{ mm} \cdot A = 640 \text{ cm}^2$				
0.01-1.6	Height H	735	760	83	30	
0.2 to 1 bar	Actuator	\emptyset D = 285 mm · A = 320 cm ^{2 1)}				
0.5 to 1.5 bar	Height H	735	760	83	30	
	Actuator	$\varnothing D = 285 \text{ mm} \cdot A = 320 \text{ cm}^{2 \text{ 1}}$				
1 to 2.5 bar	Height H	735	760	830		
	Actuator	$\varnothing D = 225 \text{ mm} \cdot A = 320 \text{ cm}^2$				
Weight ²⁾ , approx.		75 kg	95 kg	250 kg	270 kg	

Optionally with 640 cm² actuator

The weight applies to the version with the material specifications EN-GJL-250/PN 16. Add +10 % for all other materials.

Installation

- Install valves with the actuator suspended downward.
- Install pipelines horizontally with a slight downward slope on both sides of the valve to prevent condensed water from collecting.
- The direction of flow must match the direction indicated by the arrow on the body.
- Connect a control line to the actuator from the point of pressure tapping located approx. 1 m downstream of the valve in the pipe wall or at the point of measurement of the connected plant (with compensation chamber, if applicable).

Accessories

- Screw joints with restriction for connection of the control line (e.g. 6 or 12 mm pipe).
- Only applicable to valves balanced by a bellows: compensation chamber for condensation and to protect the operating diaphragm against extreme temperatures. The chamber is required for steam and liquids above 150 °C.

For detailed information on accessories refer to Data Sheet T 2595
