

## T 5869 EN

### Single-seated Type 3213 Globe Valve, unbalanced Single-seated Type 3214 Globe Valve, balanced

Electric Control Valves with safety function, tested according to DIN EN 14597  
Types 3213/5827-A, 3213/5725-3, 3213/5725-8 and 3214/5827-A, 3214/3374, 3214/5725-3, 3214/5725-8

#### Application

Globe valves mounted on electric actuators with safety function to protect heating systems against excess temperatures or pressures · Suitable for water and steam

**DN 15 to 250 · PN 16 to 40 · Temperatures up to 220 °C**

The control valves consist of a globe valve and an electric actuator with safety function. The control valves can take on the task of a shut-off valve within safety interlock circuits triggered by the signal of a temperature or pressure limiting device or upon power supply failure.

The control valves are tested by the German technical surveillance association TÜV according to DIN EN 14597 and have been defined as shut-off and control devices.

#### Versions tested according to DIN EN 14597

- With **Type 3213 Globe Valve** · Unbalanced

Electric control valves		
Type 3213/5827-A	PN 25	DN 15 to 25
	PN 16	DN 32 to 50
Electric control valve with electric actuator with process controller for domestic hot water heating		
Type 3213/5725-3	PN 25	DN 15 to 25
	PN 16	DN 32 to 50
Electric control valve with electric actuator with process controller for heating and cooling applications		
Type 3213/5725-8	PN 25	DN 15 to 25
	PN 16	DN 32 to 50

- With **Type 3214 Globe Valve** balanced by a corrosion-resistant metal bellows

Electric control valves		
Type 3214/5827-A	PN 16 to 40	DN 15 to 50
Type 3214/3374	PN 16 to 40	DN 65 to 250
Electric control valve with electric actuator with process controller for domestic hot water heating		
Type 3214/5725-3	PN 16 to 40	DN 15 to 50
Electric control valve with electric actuator with process controller for heating and cooling applications		
Type 3214/5725-8	PN 16 to 40	DN 15 to 50

Fig. 1: Type 3213/5827

Fig. 2: Type 3214/3374

#### Register number

The actuators with fail-safe action in conjunction with the listed valves are tested by the German technical surveillance association TÜV according to DIN EN 14597. The register number is available on request.

**Also available:** Type 3213 and Type 3214 Globe Valves with electric or pneumatic actuators (not tested according to DIN EN 14597), see Data Sheet ▶ T 5868

## Principle of operation (Fig. 4)

A safety mechanism in the actuator is triggered when the supply voltage fails or the control signal is interrupted by the limitation equipment due to the temperature or pressure exceeding the adjusted limit. As a result, the valve is closed by the force of the compression springs in the actuator.

The medium flows through the single-seated globe valve in the direction indicated by the arrow. The cross-sectional area of flow between the seat (2) and plug (3) is determined by the position of the plug stem.

The Type 3214 Valve is balanced. The pressure upstream of the plug is transferred through a hole in the plug stem (4) and acts on the outside of the balancing bellows, whereas the pressure downstream of the plug acts on the inside of the bellows. As a result, the forces created by the differential pressure that act on the plug are eliminated. The Type 3214 Globe Valve can also be fitted with a flow divider ST 1. Refer to Data Sheet ▶ T 8081.

The plug is moved by changing the control signal applied to the actuator.

The valve and actuator have a force-locking connection for valve sizes up to DN 50 and a form-fit connection for valve sizes DN 65 and larger.

## Electric actuators

The Types 5827 and 3374 Electric Actuators can be controlled by three-step signals or, in the version with positioner, with signals from 0/4 to 20 mA or 0/2 to 10 V. Various electrical accessories can be optionally installed.

Refer to the data sheets for more details on the electric actuators:

▶ **T 5827:** Type 5827 Electric Actuator

▶ **T 8331:** Type 3374 Electric Actuator

## Electric actuators with process controllers

The electric actuator with process controller consists of a linear actuator with an integrated digital controller. The TROVIS 5725-3 Actuator is suitable for domestic hot water heating. The TROVIS 5725-8 has two PID control modules and is ready-wired for heating and cooling applications.

Refer to the data sheets for more details on the electric actuators with process controller:

▶ **T 5724:** TROVIS 5725-3 Electric Actuator with Process Controller for domestic hot water heating

▶ **T 5724-8** TROVIS 5725-8 Electric Actuator with Process Controller for heating and cooling applications

## Installation of the control valve

Install the valve with the actuator in the upright position. Other mounting positions on request.

In safety interlock circuits, a strainer (e.g. Type 2 NI ▶ T 1015) must be installed upstream of the valve in the direction of flow.

## Terms for control valve sizing

acc. to IEC 60534, Parts 2-1 and 2-2:  $F_L = 0.95$   $x_T = 0.75$

## Selection and sizing of the control valve

1. Calculate  $K_V$  coefficient according to IEC 60534.
2. Select valve size DN and  $K_{VS}$  coefficient from Table 3.
3. Check the permissible differential pressure from Table 3.
4. Check permissible temperature and select valve version from Table 1
5. Select suitable actuator from Table 3 and from the technical data of the actuators.
6. Select materials, pressure and temperature from Table 1 to Table 3 and from the pressure-temperature diagram Fig. 3.
7. Select additional accessories depending on the electric actuator. Refer to technical data of the actuators for more details.
