

SAM SERVICES

You can rely on us

SMART IN FLOW CONTROL

LOCAL CUSTOMER SUPPORT ON ALL CONTINENTS

Founded in 1907, SAMSON has since become a worldwide leader in the manufacture of expertly engineered control valves, positioners and other valve accessories for all industrial processes.

SAMSON has over 50 subsidiaries, amongst them noted manufacturers of special valves, such as AIR TORQUE, CERA SYSTEM, LEUSCH, PFEIFFER, RINGO VÁLVULAS, SED, STARLINE and VETEC.

We are represented in over 80 countries to assist our customers on all continents. SAMSON's after-sales service team is capable of providing fast customer service all over the globe.

Our products are designed to function reliably in industrial processes. High system availability is the top priority. However, we cannot prevent parts from wearing out in our high-grade products after long periods in operation or due to the use of challenging process media or rough ambient conditions. In such cases, our after-sales service team can help.

Our genuine spare parts meet the same high quality standards that apply to all products made by SAMSON. Tailored spare parts kits are the basis for an efficient maintenance strategy. Our services cover all stages of the life cycle of our control equipment. They include simple troubleshooting as well as comprehensive service agreements for entire projects. We provide the services you need to ensure the availability of their plants and production processes in the long term.

Benefit from our experience:

- Extensive training programs for the repair and maintenance of SAMSON products
- Start-up support
- Optimization of controlled systems to improve plant performance
- Management of spare parts, repairs and shutdowns for your plant
- Tests and simulations

START-UP

The start-up and commissioning of process engineering plants, systems and assets frequently involves fine-tuning to achieve full functionality under the prevailing conditions. Yet, start-up is often not so straightforward due to complex or new devices that site personnel is not yet familiar with or devices that are not easily accessible or as a result of risk-intensive applications. Our team of after-sales service experts knows all SAMSON products inside out and is familiar with the tricks of the trade to successfully complete product start-up.

Our services:

- Start-up of systems and complex plant segments including
 - Control of tunneling machinery
 - Steam applications involving anti-surge valves
 - Cryogenic applications involving cryogenic valves, self-operated regulators and digital differential pressure meters
 - Applications in building automation
- Recently introduced innovations by SAMSON include
 - FROSTY cryogenic valve
 - Type 3251-E High-pressure Valve
 - FOCUS-1 process node

OPTIMIZATION

Your plant is up and running. Yet, on closer inspection, you are not satisfied with plant performance or the installed valves are wearing down too quickly? The problem often lies in the incorrect valve sizing. Valves that are sized too large or too small remain in their end positions most of the time. Our after-sales service team can support you in plant monitoring, help you improve the control accuracy of controlled systems as well as maximize the performance and availability of your plant.

Plant monitoring is based on the data collected in the field by our digital positioners: they analyze the data with the aid of the algorithms used by the EXPERTplus valve diagnostics software and the SAM VALVE MANAGEMENT asset management system.

Our services:

- Upgrade of smart field devices to enable valve diagnostics and asset management
- Read out positioner data
- Predictive plant monitoring with SAM VALVE MANAGEMENT or prescriptive plant monitoring with SAM GUARD®
- Analysis of device- and plant-related reports
- Online function testing of safety valves
- Re-engineering
- Condensate measurements
- Implementation and management of electronic nameplate for the unique identification of devices

SAM VALVE MANAGEMENT

MAINTENANCE AND REPAIRS

Plant revisions are conducted on a regular basis in the process industry. Nevertheless, the shutdown, maintenance and repair of plant sections or even entire plants is often compared to performing open-heart surgery. Many incalculable factors are involved while planning and performing revisions.

This underlines the importance of performing revisions with reliable and proficient partners. As your partner for plant revisions, you can rely on SAMSON. SAMSON's after-sales service team knows that plant outages can be costly. As part of an effective shutdown management, we assess the conditions on site as early as possible before the service work starts. If necessary, staff are instructed to prepare them for any special working conditions, legal requirements or stricter safety requirements that may apply.

Our services:

- Standard repairs and modifications performed on SAMSON and third-party products (self-operated regulators as well as globe, rotary and hand-operated valves)
- Plant walkdowns and asset prioritization to develop a shutdown and service scheme
- IT-based shutdown preparation
- Support in spare parts management and stocking the right parts
- Compilation of valve data in a master file including photo documentation
- Taking on the supervisor role during plant shutdowns
- On-site and in-house valve decontamination
- Installation and removal of valves in plants
- Shuttle service to transport valves to our facilities for servicing
- Cleaning of valves for oxygen service and food processing in cleanrooms

TESTS AND SIMULATIONS

The ROLF SANDVOSS INNOVATION CENTER with its infrastructure and more than 200 test instruments and setups enables our R&D engineers as well as our customers to perform a wide variety of device tests and simulations.

An area of more than 7000 m² is available for prototyping, simulations and a wide variety of tests. New fields in valve R&D, for example data analysis and cloud technologies, are being explored in the ROLF SANDVOSS INNOVATION CENTER in addition to the traditional research topics, such as materials science, flow engineering, cryogenics, acoustics, control engineering, device safety and system integration.

Our services:

- Measurement of valve characteristics
- Standard and special tests in the field of fluid mechanics and acoustics
- Static tests and cryogenic flow tests
- Standard and special valve tests to determine flow coefficients
- Endurance tests
- Specific material testing
- Vibration tests
- EMC testing
- Device safety testing
- CFD simulations
- Injection molding simulations
 - FEM simulations

We perform all these services reliably on SAMSON and third-party products.

TRAINING COURSES

“Become a master at what you do”: this is also true when handling SAMSON’s engineered products. To turn your staff into true product specialists as well, we teach them how to start up SAMSON devices, connect them to a process control system or service and repair them.

SAM SERVICES

The after-sales service team also regularly trains and audits our authorized SAM SERVICES providers to ensure that they handle, repair and service all SAMSON products according to our technical standards.

Our services:

- Training courses in the fully equipped Global Training Center (GTC) at our Frankfurt site
- Training using original products from the SAMSON product range including our CERA, LEUSCH, PFEIFFER, RINGO, SED, STARLINE and VETEC product brands
- Training programs tailored to participants' needs
- Training courses in small training groups with no more than five participants held by experts with many years of field experience
- Training courses held in German or English
- Training and auditing of authorized service partners

SAMSON AT A GLANCE

STAFF

- Worldwide 4,500
- Europe 3,600
- Asia 600
- Americas 200
- Frankfurt am Main, Germany 1,900

INDUSTRIES AND APPLICATIONS

- Chemicals and petrochemicals
- Food and beverages
- Pharmaceuticals and biotechnology
- Oil and gas
- Liquefied Natural Gas (LNG)
- Marine equipment
- Power and energy
- Industrial gases
- Cryogenic applications
- District energy and building automation
- Metallurgy and mining
- Pulp and paper
- Water technology
- Other industries

PRODUCTS

- Valves
- Self-operated regulators
- Actuators
- Positioners and valve accessories
- Signal converters
- Controllers and automation systems
- Sensors and thermostats
- Digital solutions

SALES SITES

- More than 60 subsidiaries
in over 40 countries
- More than 200 representatives

PRODUCTION SITES

- SAMSON Germany, Frankfurt, established in 1916
Total plot and production area: 150,000 m²
- SAMSON France, Lyon, established in 1962
Total plot and production area: 23,400 m²
- SAMSON Turkey, Istanbul, established in 1984
Total plot and production area: 11,100 m²
- SAMSON USA, Baytown, TX, established in 1992
Total plot and production area: 20,000 m²
- SAMSON China, Beijing, established in 1998
Total plot and production area: 47,000 m²
- SAMSON India, Pune district, established in 1999
Total plot and production area: 28,000 m²
- SAMSON AIR TORQUE, Bergamo, Italy
Total plot and production area: 27,000 m²
- SAMSON CERA SYSTEM, Hermsdorf, Germany
Total plot and production area: 14,700 m²
- SAMSON KT-ELEKTRONIK, Berlin, Germany
Total plot and production area: 1,100 m²
- SAMSON LEUSCH, Neuss, Germany
Total plot and production area: 18,400 m²
- SAMSON PFEIFFER, Kempen, Germany
Total plot and production area: 20,300 m²
- SAMSON RINGO, Zaragoza, Spain
Total plot and production area: 19,000 m²
- SAMSON SED, Bad Rappenau, Germany
Total plot and production area: 10,400 m²
- SAMSON STARLINE, Bergamo, Italy
Total plot and production area: 27,000 m²
- SAMSON VDH PRODUCTS, the Netherlands
Total plot and production area: 12,000 m²
- SAMSON VETEC, Speyer, Germany
Total plot and production area: 27,100 m²
